

installing and using your programming environment

## Module 1

Intro to computer programming, variables, and comments

## Module 2

Basic data types, operations, and flow control (decision-making statements)

## Module 3

Flow control (loops), int and float types, typecasting, and computer logic

## Module 4

Switch, aggregating data into arrays, pointers, and the basics of strings

## Module 5

Advanced operations on arrays and pointers, memory management, and the basics of functions
